Packaging unit: Individual

Cross Check™ provides a practical visual method for identifying nuts, screws, sealing caps and assemblies that have been loosened through vibration or tampering.

It offers protection for your warranty from claims of tampering. If parts loosen off or are tampered with, the marking is broken. Highly visible in ambient light and fluoresces under UV light. Excellent adherence characteristics on metal and many other materials.

- Tamper- proof marking of screwed connections.
- Suitable for most surfaces
- Highly visible
- Excellent adherence characteristics
- Makes loose screws and nuts visible
- Offers protection for your warranty
