Description

Electrolytic marking process:

The GIMA etching process is a manual marking process for permanent labelling of steel, stainless steel, hard metals, titanium, chrome, raw aluminium, non-ferrous metals and almost any electrically conductive metals, without deformation, for small or medium series production runs.

The mobile device is ideally suited to the marking of larger workpieces.

Technical data:

230V, AC, 22 VA, 50 Hz, 0,15 A

Scope of delivery

- Marking device GG07 in aluminium suitcase
- Mains cable
- Manual graphite stamp (20 mm)
- Felt roll 2 m
- Electrolyte EH01 for steel and stainless steel - 100 ml
- NEUTRALIX (cleaner) - 100 ml

Accessories

- Manual graphite stamp
- Contact workplate made from V4A
- Connection cable
- Marking felt roll
- Electrolyte
- NEUTRALIX
- Stencil printer
- Stencil cartridges
- Stencils for serial work (e.g. logos, special characters, scales)
